Subject Index

AR formulation, 86
ARCH model, 11
augmented Dickey–Fuller test, 111

Bartlett correction, 51, 90
BEKK, 180, 185
BEKK representation, 3
bootstrapping impulse responses, 135
Brownian motion, 50

Cagan's model, 79
causal inference, 31
causality, 27, 28
causality in forecasting, 36
causality in economics, 30
Chow tests, 129
CI(2,1) relations, 85
CI(2,2) relations, 87
co-breaking, 40
co-integration rank, 89, 116
co-integration relations, 36, 115
conditional correlation, 5, 9, 183
conditional density, 149, 150
conditional factorisation, 38
conditional variance, 4
conditional/marginal factorization, 164
congruence, 153
Constant Conditional Correlation (CCC) model, 180
cumulated nominal shocks, 76
cumulated real shocks, 76
cumulated temporary shocks, 74, 158
cycle, 73, 74
cyclical component, 74, 76

Data Generation Process (DGP), 22, 108, 148
deterministic component, 88
deterministic components in I(2) model, 71, 88
deterministic trends, 74
DGP, 23, 149
diagnosing I(2), 80, 82
double unit roots, 71
dynamic multipliers, 165, 166

econometric model, 24
empirical Granger non-causality, 34, 150
encompassing, 154
exchange rate, 9
exclusion restrictions, 127
explosive root, 98

fractional integration, 141
forecast error, 138
forecast error variance decomposition, 138
forecasting in open models, 166
foreign direct investment, 9

GARCH model, 3
generalised impulse response, 12
generalised impulse response method, 14
Granger causality, 33, 150
Granger representation theorem, 10

heuristic optimisation techniques, 215
hyper-inflation, 70

I(2) model, 85, 88
identification, 204
identification of structural Vector Equilibrium Correction Model (VEqCM), 203
impulse response, 13, 14, 15, 17, 34, 40, 41, 42, 43, 107, 108, 128, 133, 134, 135, 136, 137, 138, 140, 148, 158, 159, 160, 164, 165, 168, 198, 224
impulse response analysis, 12, 41, 133, 157
impulse response function, 13
impulse response in closed systems, 159, 165
impulse responses in open systems, 159
inflation rate, 74
information criterion, 214
interpreting the I(2) structure, 91
invariance, 151
irregular component, 73

© Emerald Group Publishing Limited

joint density, 149

Keynesian-type model, 9

labour productivity , 203
labour productivity equation, 203
labour productivity function, 197, 203, 209
Likelihood Ratio (LR) test, 115
local Data Generation Process (DGP), 24, 25, 148, 149
long-run stochastic $I(2)$ trends, 78
LR tests, 116
Lucas critique, 10, 167

marginal data density, 179
Markov Chain Monte Carlo (MCMC) methods, 180
Maximum Likelihood (ML) estimation, 3, 108, 156, 178, 208, 209
Memetic algorithms, 219
Metropolis–Hastings algorithm, 179
Metropolis–Hastings Markov chains, 179
misspecification tests, 207
ML estimation, 120
model, 13
model reduction, 127
models nested in t-VECH, 183
money demand, 109, 126
money stock, 79, 109
money supply/demand, 71
money velocity, 79
Monte Carlo simulation, 220
moving average representation, 87

near unit roots, 83

order of integration, 110
orthogonal GARCH model, 4, 15
orthogonalized impulse responses, 134
over-identifying restrictions, 124

panel data study, 11
Pantula principle, 111
parameter constancy analysis, 130
permanent shocks, 74
policy analysis, 39
policy instruments, 40, 148
polynomial co-integration, 100
price homogeneity, 78, 94
price mark-up function, 203
principal component representation, 4

reduced form Vector Autoregression model (VAR), 13
response analysis, 157
response analysis in closed models, 159
response analysis in open models, 163

second-order stochastic trends, 75
size distortions, 55, 118
standard percentile interval, 135
stochastic, 73, 74, 75, 76, 77, 78, 79, 88, 91, 92, 93, 94, 206
stochastic trend, 73, 74, 75, 76, 77, 78, 79, 88, 91, 92, 93, 94, 206
strong exogeneity, 26
structural breaks, 39
structural Vector Autoregression model (VAR), 12, 41, 134, 203, 215
structural Vector Equilibrium Correction Model (VEqCM), 203
super exogeneity, 26, 35, 151

target variables, 39, 147
tests for parameter constancy, 131
Threshold Accepting (TA) algorithm, 219
time varying covariance matrix, 13
transitory shock, 74
trend-cycle formulation, 76
two-step estimator, 123

unit root tests, 112, 113, 114
unit root tests structural breaks, 112

VechGARCH models, 180, 185
Vector autoregression model (VAR), 155, 158, 217
Vector autoregression process, 2, 158
Vector error-correction model (VECM), 115, 217
Vector equilibrium correction model (VEqCM), 156, 158, 198

wage function, 201
weak exogeneity, 25
Wold representation, 161
