

# INDEX

- AgDrone System™, 9–10
- Agricultural machinery, 20
- Agrochemicals, 21, 25–27
  - advantages of, 25–26
  - disadvantages of, 26–27
- Agroptima, 12, 14
- Agrotechnology, 81–83
- Agrotechnology solutions, 111–116
  - aim and objectives, 116–117
  - feasibility analysis, 157–161
  - proof-of-concept activities, 118–141
- Agrowin, 11, 14
- Aguascalientes, 35
- Aguasmarket, 12, 14
- Arduino Mega 2560, 59, 67, 74–75, 76–77, 118–119, 122–124, 126–127, 129–130, 133–134, 136–140, 145–147, 155–157, 160–161, 163, 164, 166–169
  - hardware components, 73
  - technical specification, 78
- Artificial neural networks, xviii
- ATmega2560
  - microcontroller, 165–166
- Atmospheric sensors, technical specification of, 62, 63
- Battery life, 69–70
- Battery power
  - consumption calculation, 71
- BIS Research, 58–59
- Brioagrow, 8–9, 14
- Broccoli (*Brassica oleracea*)
  - plantation of, 4–7
  - producers, in Mexico, 44–47
- Business user case, 84–86
- Campeche, 35
- Cargill, 20–21
- Chiapas, 36
- Coahuila, 36
- Colima, 36

- Comma-separated value (CSV), 119–120, 123, 125–127, 129, 131–132, 143–144
- Crop menu sequence, 99
- Crop user case description, 87–88
- Data acquisition (DAQ) system, 114–115, 117
- Database (DB)
  - creation, 1–3
  - development and implementation of, 3–4
  - sequence, filling, 99
  - user case description, filling, 90, 92, 96
- Data mining, 1–3
- DHT22 sensor, 146–147, 155, 156–157
- Differentiated integral processes, xviii
- Direct sowing, 21, 24–25
  - advantages of, 24
  - disadvantages of, 24–25
- DS3231 RTC, 155–156
- Durango, 37
- EC-05 (soil moisture sensor), 61–65
- Electrical conductivity (EC) measurement, 127–135
- Employee administration user case description, 92, 97
- Employee management sequence, 99
- Entity-relationship diagram (ERD), 98, 101
- 5TE sensor probe, 129–130, 131–132, 133–134, 135, 145–146, 152–153
- 5TM (soil temperature and moisture sensor), 60–61
- Fuzzy logic, xviii
- Geographical information system (GIS), 22–23
- Global positioning system (GPS), 22–23, 53–54, 58–59
- Global radiation measurement, 136–141
- Graphical user interface (GUI), 164
- GS3 (electrical conductivity sensor), 61
- Guanajuato, 37
- Guerrero, 37–38
- Hardware brain, 73–80
  - Arduino Mega 2560, 76–77, 78
  - Raspberry Pi 3 Model B, 74–76
  - XBee PRO Series 1, 77–80
- HCI, 99–101
- Hidalgo, 38
- Hierarchical control model, 50–51

- Historic data use case diagram, 86–87
- HMP-60 (humidity and temperature probe sensor) sensor, 60, 121, 136–137
  - configuration values, 123–124
- HoneyComb, 9–10, 14
- Humidity measurement, 120–127
- Hybrid seeds, 20
- IEEE 802.15.4 standard
  - XBee PRO Series 1, 78, 79–80
- Intellectual property analysis, 28–33
  - computer programs, protection of, 30–33
- Internal control models, xx–xxi
- Jalisco, 38
- LM355 sensor, 165
- MakeMap™ Processing, 9–10
- Matplotlib software, 164, 167–169
- Monsanto, 20–21
- Morelos, 38
- Nayarit, 39
- Non-linear control systems, 49–50
- Nuevo León, 39
- Oaxaca, 39
- Optimal control systems, 49–50
- Outside temperature measurement, 120–127
- Planting techniques, 21–22
- Prediction models, xix–xx, xx, xxi–xxii
- Proagro Productivo, 34
- Production control, xix–xx, xx, xxi–xxii
- Proof-of-concept activities, 118–141
- Puebla, 39
- Qualcomm, 30–31
- Querétaro, 39
- Quintana Roo, 39–40
- Raspberry Pi 3 Model B, 67, 74–76, 118–120, 123–124, 125–127, 129, 133–134, 135, 137, 140–141, 143–145, 160–161, 163, 164, 166–169
  - hardware components, 73
  - software, 126–127
  - technical specification of, 75
- Remote control agriculture, 22
- Sagarpa, 34–42
- San Luis Potosí, 40

- Sensor nodes (SNs), 114, 115–116, 117
- Sensors, 22–23, 55–65
  - atmospheric sensors, technical specification of, 62, 63
  - EC-05 (soil moisture sensor), 61–65
  - 5TM (soil temperature and moisture sensor), 60–61
  - GS3 (electrical conductivity sensor), 61
  - HMP-60 (humidity and temperature probe sensor), 60
  - sequence management, 99
  - soil sensors, technical specification of, 62–65
  - SP-212 (solar radiation sensor), 60
  - use case description, management of, 89–90, 95
- Sinaloa, 40
- Sink nodes, 65–67
  - structure of, 65–66
- Sismagro, 11–12, 14
- Smart Agriculture, xviii
- Smart Fertilizer
  - Management Software, 10–11, 14
- Smart monitoring and control system (SMCS), 99–101, 111–112, 114–116
- Soil
  - compaction, 16, 17
  - erosion, 16
  - moisture, 127–129
  - productivity improvement techniques, 16
  - sensors, technical specification of, 62–65
  - temperature
    - measurement, 127–135
- Solar panels, 67–73
  - battery power
    - consumption calculation, 71
    - technical specification of, 72
  - V44 batteries, 72
- Sonora, 40
- SPI-212 sensor, 60, 137–140, 146–147
- System architecture, 49–52
  - hardware brain, 73–80
    - Arduino Mega 2560, 76–77, 78
    - components, 73
    - Raspberry Pi 3 Model B, 74–76
    - XBee PRO Series 1, 77–80
  - wireless sensor network, 52–73
    - sensors, 55–65
    - sink nodes, 65–67
    - solar panels, 67–73

- Tabasco, 41
- Tamaulipas, 41
- Technology readiness level (TRL), 115–116, 157–161
- Tlaxcala, 41
- Transgenic seeds, 20–21, 27–28
  - advantages of, 27–28
  - disadvantages of, 28
- UAA, 115–116
- University of Derby (UoD), 115–116
- V44 batteries
  - Arduino runtime from, 72
  - technical specification of, 72
- VegHands, 7–8, 14
- Veracruz, 41–42
- Volumetric water content (VWC), 60–61
- Water conservation, 111
- Wireless sensor network (WSN), 52–73, 84, 113–114, 115–118, 163, 164, 166
  - description and functions, 85
  - sensors, 55–65
    - EC-05 (soil moisture sensor), 61–65
    - 5TM (soil temperature and moisture sensor), 60–61
    - GS3 (electrical conductivity sensor), 61
    - HMP-60 (humidity and temperature probe sensor), 60
    - SP-212 (solar radiation sensor), 60
  - structure of, 54
  - system architecture of, 55
- XBee PRO Series 1, 59, 67, 77–80, 121, 163, 164, 165, 166, 167
  - hardware components, 73
- Yucatán, 42
- Zacatecas, 42
- Zigbee network, 118
- Zigbee S2C modules, 141–142, 143
