It has come to the attention of the publisher that the article Shuo-Fang Liu, Yuan-Chin Hsu and Hung-Cheng Tsai, “Development of a new cultural design process using Kansei engineering and fuzzy techniques: a case study in Mazu crown design” published in *International Journal of Clothing Science and Technology* Volume 31 Issue 5 was published in an incorrect issue. The paper should have been published as a special issue paper in the “Kansei Engineering in Textiles and Clothing” special issue. We would like to emphasise that the authors paper remains part of and contributes significantly to the special issue. The publisher sincerely apologises for the problems caused by this to both our authors and readers.
