INDEX

Adaptive Boosting (AdaBoost), 60, 64, 67
Additive model (ADD), 166
Aggregation, 130–131, 133, 136–137
Agrarian society
  of depressed economies, 99–102
  Ukrainian agrarian society, 101–102
Allocative efficiency, 167, 170
Analogues, 109
Analytic Hierarchy Process (AHP), 36
  AHP-GP, 45
Analytic network process (ANP), 35, 36
Analytical models, 60
Approximate methods, 34–35
Artificial intelligence (AI), 60
Artificial neuro-fuzzy systems (ANFIS), 60–61
Australian universities, 145

"Background" poverty, 101–102
Benchmark private universities, 144
Benchmark public universities, 144, 151
Benchmarking, 201
  DEA, 210–214
  OWA, 210–214
  results, 208
  WLC model, 209–210
"Best" practices, 208
Branch-and-bound method, 32, 34
Branding of rural areas, 99
Business activity, 108

Capacity monitoring of Poverty, 104–105
Carbon emission, 14, 16
CART algorithm, 63
Case-based reasoning (CBR), 35
Charnes, Cooper, and Rhodes DEA model (CCR DEA model), 158–159, 215–216
Charnes, Cooper, and Rhodes model (CCR model), 148, 165–166
Classical MPNP model, 9–10
Climate change, 137
Closed loop supply chain network (CLSC network), 2–3, 10
  linear PP, 6–9
  literature review, 3–5
  MCLP, 6
  numerical example, 19
  problem description and assumptions, 9–11
  problem notation and formulation, 11–19
  product substitution, 5–6
  results, 19–21
Composite indicators, 118, 124, 126, 133–136
Composite vulnerability indices, 124–129
Conditional value at risk (CVaR), 4, 7, 8–9, 11–12, 33, 38–39
Constant returns to scale technology (CRS technology), 153, 172
  efficiency, 172
Constraints, 16–19, 47–48
  order-to-period assignment constraints, 47
  producer capacity, 47
  risk constraints, 48
  supplier selection constraints, 47
Consumer credit, 59–60
Consumer drug stores, 159
Consumer loan evaluation using machine learning techniques
  AdaBoost, 64, 67

data, 61–62
decision trees, 63–64
empirical analysis, 66–67
methodology, 62–63
SVMs, 37, 66
Consumer satisfaction, 175
CPLEX Solver
results, 50
sets and parameters in, 48
Cross-efficiency model, 166
CVS, 157, 159–160

Data, 61–62
Data envelope, 216–217
Data envelopment analysis (DEA), 35, 118, 144, 158–159, 165–166, 188–189, 208–209, 210–214
data and methodology, 150–153
drug store efficiency, 160
empirical analysis, 153–155
mathematical description, 120–122
model, 146–150
model results, 222
results, 160
runs for consumer drug stores, 159
Decision strategy, 122
Decision trees, 63–64
learning, 63
models, 67
Decision-makers, 118
Decision-making units (DMUs), 35, 146–147, 158, 188, 209, 217, 224
composite performance measures, 209
geometric visualization, 190–201
performances measures, 219–223
real-life numerical example, 201–204
standardized dataset, 218
technically efficient, 191, 198, 200
δ-degree of freedom (DF), 189–190
δ-SBM, 188–189, 194–199, 201, 204
Demand estimation, 26
Dynamic programming, 34

Economic
behavior model, 99
efficiency, 167, 170
poverty, 101
Economical objective, 2–3
Effectiveness, 173, 175
Efficiency, 147, 157–158, 167, 175
measurement, 170–173
of operation, 208
Empirical analysis, 66–67
of DEA, 153–155
Enhanced Russell Measure (ERM), 165–166
Environmental objective, 2–3
Environmentally conscious manufacturing and product recovery (ECMPRO), 3
Epsilon KAM (ε-KAM), 167, 176–180, 182–183
Exact methods, 34

Flower selling, 13–15
Fractional linear programming model, 147
Fractional program, 147–148
Free disposal hull technology (FDH technology), 172
Fuzzy programming method, 3–4
Fuzzy set theory, 35

General circulation models (GCMs), 119–120
Generalized inverse distribution function, 11
Genetic algorithm (GA), 35
Gini impurity, 63
Global warming, 2
Goal programming, 36

Government appropriations (GA), 151–152
Greenhouse gases (GHGs), 2

Heuristics, 35
Higher education in United States, 144
Hydrologic Unit Codes (HUCs), 118
  composite vulnerability indices for, 124–129
  relative ranks, 130

Industrialization, 1–2
Information
  gain, 63
  protection, 43
Innovative portfolio approach, 40
Institute for Water Resources (IWR), 118
Integrated AHP-GP approach, 36–37
Integrated Climate and Land Use Scenarios (ICLUS), 119–120
Interactive poverty maps, 99
International Civil Aviation Organization, 180–181

KAM, 180–184
Kroger, 157, 159–160

Labor efficiency, 157–158
Linear physical programming (Linear PP), 6–9
  soft class functions, 8
Linear programming
  model, 159
  problem, 149
Linear δ-SBM, 189

Machine learning (*see also* Consumer loan evaluation using machine learning techniques), 62–65
"Marginal" poverty, 101
Market transformations, 98–99
Mathematical programming, 35–36
Maximal Covering Location Problem (MCLP), 6
Mean-variance analysis, 6–7
Membership coverage function, 16
Methodology, 62–63
Mixed integer programming models, 33
Mixed-integer linear programming model, 37
Modified (Outputs-Only) Data Envelopment Analysis, 122–123, 216–219
Moody's Investors Services, 144
Multicriteria techniques, 208–209
Multiobjective optimization problems, 37
Multiple criteria optimization, 37, 45
Multiple discriminant analysis models, 60–61
Multiple-criteria decision making (MCDM), 38
  approaches for supplier selection, 38
  evaluation criteria, 38
Multiproduct newsvendor problem (MPNP), 4–5
  classical MPNP model, 9–10
  comparison between models, 21
  flowers, 13–15
  literature review, 5–7
  models, 15–20
  practical examples, 13
  results, 16
  risk aversion, 10–11

risk measures in newsvendor problem, 7–9
VaR and CVaR, 11–12

Newsvendor model, 4–5
scripts of, 21, 25–26
Newsvendor problem, 4
risk measures in newsvendor problem, 7–9
Non-CRS technical inefficiency, 172–173
Noncontrollable factor, 180–181
Nontechnical efficiency, 170

Objective function, 47
"One-vs-rest" approach, 65
Operational effectiveness (OE), 226, 226
Operational efficiency, 226
Optimization methods, 33–34
Order rated effectiveness model (ORE model), 118, 224–229
comparison with WLC, and DEA results, 131–136
comparison with WLC results, 130–131
data description for six constituent indicator measures of vulnerability, 119–120
mathematical description, 120–122
model, 123–124
model results, 228
optimization weights, 131
Order-to-period assignment constraints, 47
Ordered weighted averaging (OWA), 118, 208–214
applying to input data, 124–129
maximum entropy weights for six indicators, 124
rated effectiveness model, 123–124, 226–229
Outputs-only DEA model (BOD model), 216–217
Overall efficiency, 167, 170

Physical programming approach (PP approach), 2–3
Poverty, 98
Price efficiency, 167, 170
Private universities, 144, 151
statistics of data, 151–152
Problem formulation, 46–48
constraints, 47–48
objective function, 47
sets and parameters, 46, 48
variables, 46
Producer capacity, 47
Product substitution, 5–6
Production function (production frontier), 168–169, 173–174
Production Possibility Set (PPS), 165–166, 168–169
Production theory, 168
Productive efficiency, 167
Productivity, 157–158, 167
measurement, 173–175
Public universities, 144
statistics of data, 151–152
variables to evaluating, 153

Ranking DMUs, 201
Redundancy strategy, 45
Relative efficiency, 167, 170, 172
Risk aversion, 10–11
Risk constraints, 48
Risk measures
in newsvendor problem, 7–9
in supply chain, 38–39
Risk spectrum function, 11
Rite Aid, 157, 159–160
Rural development, 99

Scalarized problem, 37
Sets and parameters, 46, 48
Simple multiattribute rating technique (SMART), 35

Slack-based measure model (SBM model), 166
Socio-economic development of rural areas, 102–104
Specific heuristics, 35
Standards, 109
Supplier selection, 38
  constraints, 47
  MCDM for, 38
Supply chain, 31–32
  AHP, 36
  approximate methods, 34–35
  case study, 48–49
  DEA, 35
  evaluation criteria, 38
  exact methods, 34
  goal programming, 36
  managerial insights, 44–46
  mathematical programming, 36
  MCDM, 38
  mitigating impact of disruptions in, 39–41
  multiple criteria optimization, 37
  optimization methods, 33–34
  practical example, 46
  prevention strategies, 41–42
  problem formulation, 46–48
  protection strategies, 42–43
  recovery strategies, 43–44
  response strategies, 42
  results, 49–53
  risk measures in, 38–39
  strategies for dealing with risks, 44
Support vector machines (SVM), 60, 64–66

Technical efficiency, 167–168, 170, 172, 175
  measurement, 168–169
Technically inefficient production function, 168
Territorial branding, 102–104, 106–108
  capacity monitoring, 104–105
  model and overcoming in Agrarian society of depressed economies, 99–102
  monitoring of experience, 106–109
  socioeconomic indicators of studied rural areas, 110–111

Ukrainian agrarian society, 101–102
Ukrainian analog, 105
Uncontrollable factors, 180–184
Universities, 144
  efficiency scores for, 154

Value at risk (VaR), 6–9, 11–12, 38–39
Variable returns to scale technology (VRS technology), 172, 203
Variables, 46
Virtual input, 146–147
Virtual output, 146–147
Vulnerability, 118
  data description for six constituent indicator measures, 119–120

Walgreens, 157, 159–160
Walmart, 157, 159
Weighted average (*see* Weighted Linear Combination (WLC))
Weighted linear combination (WLC), 118, 122, 208–210
  method results, 221
  model, 209–210

Xerox Corporation, 2
