INDEX

Actively Revered class, 11, 17
Actor–object interaction effects, 36–37
Affect control theory (ACT), 2–4
  categorical inequality, 27–29
  classification process, 25
  cultural meanings, 27–29
  cultural sentiments, 30–33
  emotions, 25–26
  participants and data, 29–30
  social action, 25–26
  social inequalities, 24
  social order, cultural foundations of, 25
  social psychological theories, 25
  working consensus, 27
Affective dimension, 59
Aggregation assumption, 123
American Sociological Association presidential address, 54
Analytic methods, 61
Assertiveness, 104
Attenuation effect, 123

BayesACT, 4
Behavioral influence, 107–109
Behavioral models, 83–85
Bidirectional, reciprocal processes, 150–152
Burden of proof assumption, 122–123

Categorical inequality, 27–29
Classification process, 25
Coactor evaluation, 149
Collective orientation, 91–92
Combinatory processes, 152–155
Competition motivation, 145
Competitive dimension, 59
Confirmatory factor analysis (CFA), 61
Contextual factors, 147
Control variables, 14
Cultural sentiments, 30–33
Cultural stereotypes, 28

Daily emotional experience, 18
Data inclusion, 106–107
Deference score, 5
Dependent variables, 13–14, 59, 61
Discreditable stigmas, 124

Emotions, 25–26
  characteristics, 6–7, 11
  prediction, 7–8
  situational emotions, 6–7
  structural emotion, 6–7
Empirical methods
  analytic strategy, 13
  data, 12–13
  variables, 13–14
Everyday Specialists, 8–9, 17
Expectation states theory, 101–102
Experimental design, 105
Experimental operations, 80–83
Explicitly competitive context, 149–150
Explicit racial resentment (EXR) scale, 60–61

Factor analysis, 54–55
Fitting logistic regression models, 179
Fixed effects, 177–178
Focal independent variables, 59
Full-probability sampling (FPS), 58

General Social Survey (GSS), 2
Group position theory (GPT), 54–56

Homophily
  biased net framework, 168–174

biased net models, 172–174
complete networks, 167, 172, 174
data and methods, 175–178
inbreeding bias, 166–167
intrapopulation distribution, 167
population level, 167
sequential social exchange, 167
statistical model, 176–178
theory-driven research, 168
tracing procedure, 167
uniform biased net, 167
Hypotheses, 127–128

Inconsistency effect, 123
Independent variables, 14
Intensification of stigma, 120–121
INTERACT, 7
Interactions Menu, 8
Interorganizational competitions, 143–144
Intraorganizational competitions, 143–144

Job satisfaction, 12

K-means cluster analysis, 30

Mixed-effects logistic regression model, 177–178
Multi-sequence studies of status, 79–80
Mythical norm, 30–31

N-Effect, 147
Nonprobability sampling (NPS) methods, 58
Nonverbal mimicry, 110–111

Occupational classes, 11
Occupational prestige, 2–3
Occupational status, 2–4
Ordinary least squares (OLS) regressions, 61

Performance expectations, 101–102
Potency, 10
Privileged social identities, 28

Queen Bee Effect, 147–148

Racial prejudice, 54–56
affective response, 56–57
deep sentiments, 56–57
fear and suspicion, 56–57
stereotype content model, 56
Racial resentment (RR), 54–55
Racial threat, 55–56
confirmatory factor analyses (CFA), 64–66
descriptive analyses, 63–64
empirical measurement, 57
exploratory factor analysis (EFA), 64
group position, 55–56
multidimensionality, 57–58
racial prejudice, 55–56
regression models, 66–69
Random effects, 177–178
Random-intercept logistic regression model, 178
Reconceptualization, 5
Repulsion mechanism, 180–181
Resistance to influence, 86–87
Response latency
assertiveness, 104
behavioral influence, 107–109
data inclusion, 106–107
definition, 103–104
expectation states theory, 101–102
experimental design, 105
future research, 113–114
key measures, 106
limitations, 113–114
manipulation, 105–106
nonverbal mimicry, 110–111
participants, 105
perceptions of partner's assertiveness, 110
performance expectations, 101–102
status cues theory, 102–103

Salience assumption, 122

Self-enhancement bias, 90–91
Self-relevant domains, 147
Sequencing assumption, 78
Service-to-Society class, 9, 17
Situational emotions, 6–7
Social action, 25–26
Social comparison
  bidirectional, reciprocal processes, 150–152
  coactor evaluation, 149
  combinatory processes, 152–155
  competition motivation, 145
  contextual factors, 147
  explicitly competitive context, 149–150
  interorganizational competitions, 143–144
  intraorganizational competitions, 143–144
  N-Effect, 147
  psychology, 145
  Queen Bee Effect, 147–148
  self-relevant domains, 147
  theoretical implications, 155–159
  upward comparison, 147–148
Social identity groups, 31
Social inequalities, 24
Social order, cultural foundations of, 25
Social ordering schema, 125
Social psychological theories, 25
Social psychology, 127
Social standing, 2–3
Status characteristics theory (SCT), 120
  behavioral models, 83–85
  collective orientation, 91–92
  experimental operations, 80–83
  multi-sequence studies of status, 79–80
  new status information, 78–79
  resistance to influence, 86–87
  self-enhancement bias, 90–91
  sticky expectations, 80–89
  theoretical background, 76–80
Status cues theory, 102–103
Status generalization, 78
Status-stigma combination, 121
Status-stigma intensification, 121–128
Stereotypic cultural beliefs, 28
Sticky expectations, 80–89
Structural emotion, 6–7
Survey evidence, 11–12

Three-dimensional cultural space, 3

Variables
  control variables, 14
  dependent variables, 13–14
  independent variables, 14
