

INDEX

- absolute (post-transfer) income, 10
- additive decomposability, 81–82
- Adjusted Headcount Ratio, 66
- Armenia
 - correlations between number of consumption items curtailed, 151
 - curtailed expenditures categories in 2013, 153
 - determinants of poverty, 141–142
 - economic growth, 139–140
 - economic opportunities, 2000s, 152
 - order of curtailment of consumption expenditures, 147–150
 - poverty and income distribution, 140
 - poverty in, 152
 - socioeconomic indicators, 140
 - threshold corresponding to curtailment, 154
- asset poverty index, 240
- assimilated poverty measures, 64–65, 75–76, 78–79
- Azerbaijan
 - correlations between number of consumption items curtailed, 151
 - curtailed expenditures categories in 2013, 153
 - determinants of poverty, 141–142
 - economic growth, 139
 - order of curtailment of consumption expenditures, 147–150
 - poverty and income distribution, 140
 - poverty in, 152
 - socioeconomic indicators, 140
 - threshold corresponding to curtailment, 154
- bipolarisation indices, 52
 - defined, 53
 - notation, 53–54
- Cambodia's CESSP Scholarship Program (CSP), analysis of, 261–263
 - characteristics of CSP recipients and non-recipient applicants, 271–273
 - comparison of program effects for recipients and their siblings, 262
 - enrollment and work outcomes for children, 274–275
 - identification strategy, 276–277
 - Intent-to-Treat (ITT) estimates of program impact, 277
 - model, 263–269
 - offsetting effects, 262
 - program and data, 269–276

- proof that both children are enrolled, 296–297
- recipient household and school enrollment, 262
- results, 277–287
 - CSP program effects on the siblings of applicants, 280–281, 284–286
 - effects on school enrollment, 277–278, 286–287
 - non-pecuniary educational spillovers, 287, 290, 290n2, 291n11, 293n28
 - program effects on parents, 297–298
 - recipient effects by gender, 278–279
 - richer and poorer households, school enrollment, 286–288
 - robustness checks, 281–287
 - school-specific quartic trends and intercepts, 282–284
 - selection of CSP recipients within eligible schools, 270
- censored headcount ratio (CHR), 167, 174–175
- child-specific conditional transfer program, Cambodia, 260–261. *see also* Cambodia’s CESSP Scholarship Program (CSP)
- China, estimations of MPI (2010–2014)
 - adjusted headcount ratio, 164–167
 - advantages and limitations of dataset, 172
 - age of the household head and MPI levels, 188–191
 - Amartya Sen’s capability approach, motivation for, 162–163
 - asset ownership, 171
 - basic results, 172–174
 - China Family Panel Studies’ (CFPS) data set, 164, 167–168, 170–173, 177, 179, 200, 205, 211n11
 - Chinese traditional concept of poverty, 163
 - cooking fuel, 171
 - cross-dimensional poverty cutoff, 166
 - deprivation cutoffs, 166
 - drinking water facility, 171
 - education level of household heads and MPI levels, 182–183, 185–188
 - electricity connection, 170
 - female-headed households and MPI levels, 179, 182–183
 - flooring information, 171
 - gender difference and MPI levels, 179, 182–183, 223–227
 - household size and MPI levels, 196–197, 199–200
 - Hukou* system and MPI levels, 189, 192–195, 199, 213n34, 213n37
 - indicator analysis, 168–172, 174–175
 - indicators of destitution poverty and deprivation thresholds, 222
 - large provinces (Liaoning, Shanghai, Guangdong, Henan, and Gansu), 177–181
 - literature review, 163–164

- living standard, 170–171
- major regions (East, Central, and West), 177–178, 212n27
- methodology, 164–167
- mortality and nutrition, 170
 - nutrition (BMI) distribution
 - among ages for adults, 222
- national poverty comparisons, 228
- overlap of monetary poverty and MPI, 200
- raw headcount ratio (RHR) and censored headcount ratio (CHR), 174–175
- rural and urban areas, 175–177, 212n25
- rural official poverty line and rural poverty, 1980–2014, 221
- sampling procedure and weights, 168
- sanitation, 170–171, 211n19
- schooling and child school attendance, 169–170
- by social groups, 179–200
- chronic and intertemporal poverty
 - measures, 107–111
 - application of, 129–131
 - dynamic models of evolution of wellbeing, 115–129
 - autoregression with household fixed effect, 121–125
 - autoregression with PA trend, 125–126
 - comparison and evaluation of, 126–129
 - household-specific time trends, 119–121, 129
 - linear interpolation, 118–119
 - log consumption ratio
 - predictions, 118–120, 122–125, 127–128
 - statistical and econometric methods to, 117
- Foster and Santos's measure of chronic poverty, 110, 133n6
- normative and positive aspects, analysis of
 - descriptive statistics, 113–115
 - ERHS sample, 111–115
 - unit of analysis, 112–113
 - unit-period wellbeing indicator, 112
- orderings of wellbeing
 - trajectories, 107–109
 - duration sensitivity or contiguity, 108–109
 - non-decreasing compensation measures, 109–110, 130
- Porter and Quinn's measure of intertemporal poverty, 110, 133n7
- 'true' degree of, 131
- clustering-increasing transfer (CI), 43, 46, 55
- composite income-net worth poverty index, 239
- deprivation order, 138
- entrepreneurship, 300
 - impact of inequality, long term effects, 301, 303–307
 - relationship between inequality and, analysis of
 - data and methodology, 307–315, 335–337
 - early entrepreneurial activity (TEA) during 2005–2011, 309, 311, 316–317, 338–341
 - econometric results, 315–319

- GEM survey, 309–311, 334–335
- historical inequality measures, 307–309, 315–319, 334
- institutional variables, 311–314, 325–327
- panel random effects, 314–315
- robustness checks, 319–327
- financial poverty index, 240
- Foster–Wolfson bipolarisation index, 41, 47, 52, 56–57
- Georgia
 - correlations between number of consumption items curtailed, 151
 - curtailed expenditures categories in 2013, 153
 - determinants of poverty, 141–142
 - economic growth, 139–140
 - order of curtailment of consumption expenditures, 147–150
 - poverty and income distribution, 140
 - poverty headcount ratio, 154
 - socioeconomic indicators, 140
 - threshold corresponding to curtailment, 154
- Gini coefficient, 3, 5, 13, 16–17, 22n3, 47, 317
 - between-group, 53
 - within-group, 53
- Gini index, 4–5, 21
 - defined on post-transfer incomes, 9
 - as a function of the transfer, 12, 22n3
 - generalised, 54
 - generalised between-group, 54
- Global Entrepreneurship Monitor (GEM) survey, 301
- income-equalizing transfer, 5
- income inequality, 2
 - Gini coefficient of, 2
- intra-household spillovers, 260
- Italy, status of immigrants in
 - acquisition of Italian citizenship, 247, 253n3, 255n25
 - average economic situation of immigrant households, 239–243
 - average values of equivalent income and wealth, 237–239
 - breakdown of immigrants by area of birth, 232–233, 236
 - composite income-net worth poverty index, 239
 - decomposition of poverty, 243–246
 - degree of integration or isolation of immigrants, 230
 - determinants of poverty and immigration, 246–249
 - economic conditions of migrants, 237–238
 - economic vulnerability, 240–241
 - educational qualifications of immigrants, 234
 - gender breakdown of immigrants, 234
 - home ownership among immigrants, 237
- Italian Survey on Household Income and Wealth (SHIW) data set, 231–232

- life expectancy, 241, 255n23
- proportion of immigrant households in “severe” poverty, 242
- share of foreign-born in Italian population, 234–235
- socio-economic conditions, 232–239
- state of poverty by immigrant status, 249–252
- Japan Fund for Poverty Reduction (JFPR) scholarship program, 270
- maximum relative bipolarisation benchmark of, 40–41
 - identifying rank-dependent Wang–Tsui indices, 46–47
 - normalisation properties of, 47–48
- characterisation of, 44–46
- desirable axioms of, 43
- implications of, 41
- normalisation axioms, 43–44
- notation, 42
- median-dependent indices, 52–53, 55–56
- median-independent indices, 52–53
- monetary poverty with MPI, 200–203
 - mismatch between multidimensional poverty and, 203
 - by quintiles and subsidy groups, 201–202
 - relative contributions for subsidy receiving/not receiving subgroups, 202–203
 - in terms of income/expenditure per capita, 201–202
- Muirhead’s theorem, 45
- Multidimensional Poverty Index (MPI), 64, 67, 85–86, 88–89, 94n4
 - estimations for China, 2010–2014
 - adjusted headcount ratio, 164–167
 - advantages and limitations of the dataset, 172
 - age of the household head and MPI levels, 188–191
 - Amartya Sen’s capability approach, motivation for, 162–163
 - asset ownership, 171
 - basic results, 172–174
 - China Family Panel Studies’ (CFPS) data set, 164, 167–168, 170–173, 177, 179, 200, 205, 211n11
 - Chinese traditional concept of poverty, 163
 - cooking fuel, 171
 - cross-dimensional poverty cutoff, 166
 - data, 167–168
 - deprivation cutoffs, 166
 - drinking water facility, 171
 - education level of household heads and MPI levels, 182–183, 185–188
 - electricity connection, 170
 - female-headed households and MPI levels, 179, 182–183
 - flooring information, 171
 - household size and MPI levels, 196–197, 199–200
 - Hukou* system and MPI levels, 189, 192–195, 199, 213n34, 213n37

- indicator analysis, 168–172, 174–175
- large provinces (Liaoning, Shanghai, Guangdong, Henan, and Gansu), 177–181
- literature review, 163–164
- living standard, 170–171
- major regions (East, Central, and West), 177–178, 212n27
- methodology, 164–167
- mortality and nutrition, 170
- overlap of monetary poverty and MPI, 200
