INDEX

Note: Page numbers followed by "*n*" indicate endnotes.

A Theory of Justice (Rawls), 179–180
Absolute inequality indices, 105
Absolute Lorenz curve (ALC), 99, 102
  multi-period mobility partial orderings with, 102–103
Aggregate relative deprivation (ARD), 180–182
  algorithm of minimizing, 182–184
AHL criterion, 129–130, 135, 143–144
Assistance transfers, 31, 56
  inequality-reducing effect of, 53
  redistributive, 52
Asymptotic test statistics, 135
Average nominal personal income, 122
Average treatment effects, 126–127

Bartholomew directional mobility indices, 76–77, 83
  background, 83–85
  Bartholomew downward mobility index, 86–88
  Bartholomew upward mobility index, 85–86
Bartholomew mobility indicator, 78
Bayes rule, 193
Bayesian approach, 77, 92–93
Berthoin reform, 127, 131, 133

Capital, income from, 8
Cash transfers, 48–53
Causality, 154
Child/children
  having children effects on poverty and household size, 153–155
  income quintile, 77, 89–91
  logarithm of child incomes, 78
  on poverty, 152–153, 167–168
  tax credit, 72*n*11
Clinton boom (1990), 8
Cluster analysis, 202*n*4
Coherent framework, 98
Complete immobility, 98, 100
Complete independence coincides, 100
Concavity, 84
Congruence of algorithm with Rawlsian social welfare program, 184–185
Consistency, 103–104
Consistent absolute inequality indices, 105
Control variables, 195
Correlated random effect approach (CRE approach), 159, 161–162, 165, 166
Correlated random effect dynamic probit with Heckman initial condition, 166
Correlation coefficient, 78
Cost-effective response, 184
Cost-effectiveness of income redistribution, 30
Counterfactual wage distribution functions, 191
Currency crisis (1990), 9

Directional mobility measurement, 76 (*see also* Multi-period income mobility)
  application of upward mobility, 88–90
  Bartholomew directional mobility indices, 83–88
  Bartholomew index, 76–77

Bayesian approach and Prais–Bibby Index, 92–93
literature review, 78–80
monotonicity, dominance and UMFSA, 90–92
new mobility ordering, 80–83
Discriminated against workers, 194
Discriminated groups, 202*n*3
Discrimination, 188
wage difference, 200
Discriminatory gaps, 191
Distance-based mobility index, 78
Distribution of individual wage gaps, 191
Dominance, 90–92
Downward mobility index, 87
Dynamic reduced-form model, 159
Dynamic-AR(1) model, 166–168

Earnings distribution, 134
Econometric model, 159–160, 189, 191
Economic domain, 25
Economic mobility, 76
Education, 196
attainment, 124, 126
testing oportunity equalizing effect of educational expansion, 126–130
Empirical discrimination model, 189
Endogeneity, 152
Equality of opportunity (EOP), 124, 128
Equalization of opportunity (EZOP), 125, 129, 135
testing, 128–130
European countries, multi-period mobility in, 109–113
European Union Statistics on Income and Living Conditions (EU-SILC), 99, 109, 156, 189, 195
Ex-ante exogenous groups, 191
Exchange mobility, 98, 119
Expenditure decisions, 151

Female
individual wage gap, 190
wage discrimination coefficient, 194–195
Fertility variables, 155, 159
Financial crisis (2008), 99
Finite mixture approach, 189
empirical illustration, 195–201
laws in Western countries, 188–189
to measure wage discrimination, 191–195
traditional empirical framework, 190–191
variable definitions, 204
First-order autocorrelation (AR(1)), 162, 166
French Berthoin reform, 124

Gap dominance test, 135
GDP growth
growth for middle and lower incomes and relationship with, 21–23
and growth in middle incomes, 16–18
General distance-based mobility index, 78
Generalized Lorenz curves (GL curves), 139–140
Generalized Lorenz domination, 81, 83
Generalized Lorenz ordering, 77
Gini coefficient, 2, 5–6, 14–15, 30, 33, 42
Gini opportunity index, 143
"Grand narratives", 13, 15, 24–25
Great Recession, 7, 10
Greek public sector wage premium, 189
Gross national income (GNI), 16–18
Groups, 188–190

Having children, 151–152
effects on poverty and household size, 153–155
Health categories, 76

Heckman approach, 162
High-income households, 44
Higher inequality, 3
Household disposable income, 4
Household economic resources, 151

Household size and poverty
data and descriptive statistics, 156–158
descriptive statistics, 174
econometric methods, 152–153
econometric model, 159–160
estimated parameters of CRE dynamic models, 177–178
estimated parameters of Heckman initial condition, 175–176
having children, 151–152
poverty and household size, 153–155
results, 160–166
simulations, 166–170
Human capital, 188

Identification strategy, 127
Imperfect information, 188
Income, 3–4 (*see also* Middle incomes)
distribution, 156
income-health matrix, 79
mobility, 98
from self-employment and capital, 8
taxes, 48–53
Income Distribution Database (IDD), 32
Income growth, 98, 119
measuring across rich countries, 3–5
Income inequality, 2, 33
implications for monitoring and promoting progress, 23–25
inequality, growth and real incomes of poor, 18–21
inequality and middle-income growth, 13–15
measuring income inequality across rich countries, 3–5
what happen to income inequality, 5–8
Income redistribution, 33
changes in redistribution to bottom 40-, 62–69
cost-effectiveness of income redistribution, 30
data, defining and measuring redistribution, 32–35
redistribution in different parts of tax-transfer system, 48–62
redistribution in tax-transfer system, 35–48
working households, 31–32
wrapping-up, 69–72
Independent variables, 195
Inequality, 2–3
measurement, 78
and middle-income growth, 13–15
Inequality of opportunity (IOP), 125
Infertility, 155
Instrumental variable approach (IV approach), 126, 154–155
Insurance transfers, 52–53
Intergenerational elasticity of income, 78
Intergenerational mobility, 98
International Comparison Program, 4
Intra-generational income mobility, 98
Inverse stochastic dominance analysis, 130, 135

Kakwani progressivity indicator, 35

Labor Force Survey (LFS), 130–131
Labor supply, 151, 154
Latent class models, 189
Lefranc, Pistolesi, and Trannoy approach (LPT approach), 128
"Liberal/Anglo-Saxon" economy, 8
Likelihood ratio test (LR test), 162
Linear model, 135
Linearized reduced-form equation, 159
Literacy mobility index, 76
Living standards, 2–4, 10, 13, 16, 18, 23–24
Loi Berthoin, 125, 127, 133
Long-term economic disparity, 153
Longitudinal data, 152
Lorenz-consistent inequality index, 100, 106
Low-income households, 44, 154
Lower incomes, growth for, 21–23
Luxembourg Income Database, 72*n*4

Luxembourg Income Study (LIS), 4–5, 7, 25*n*1, 32
Luxembourg poverty profile, 152

Maasoumi and Zandvakili mobility indices, 106–108
Markovian model, 77
Maximum likelihood techniques, 193
Micro-based analysis, 30
Microeconomic behaviors, 151
"Middle class", 13
  households, 44
Middle incomes
  GDP growth and growth in, 16–18
  growth for, 21–23
  growth in, 8–13
  inequality and middle-income growth, 13–15
Middle-and lower-income households, 2
Mincer's equations, 192, 195
Mobility, 76
  indices of Tsui, 108–109
  mobility-as-independence measures, 78
Modern theories of social justice, 124
Monotone mobility matrices, 77
Monotonicity, 79, 90–92
  axiom, 86
  property, 79
  of transition matrices, 83
MSL method, 160
Multi-period income mobility
  average nominal personal income, 122
  basic setting, 99–100
  connection to previous measurement proposals in literature, 106–109
  data description, 109
  desirable properties of, 100–102
  in European countries, 109
  indices, 99
  indices example based on absolute inequality indices, 105
  intergenerational mobility, 98
  new approach to measuring, 99
  partial orderings with absolute Lorenz curve, 102–103
  results, 109–113
  satisfaction of other desirable properties, 103–105
  simple income matrices, 119–120
Multidimensional income inequality, 98
Multinomial logit model, 193

New mobility ordering, 80–83
Non-discriminated against workers groups, 194, 202*n*3
Normalization, 104

Oaxaca–Blinder model, 189–190, 194–195, 200
OECD Income Distribution Database, 4, 25*n*2, 72*n*2
OECD Taxing Wages, 62
One-earner couple households, 73*n*19
"One-size-fits-all" solutions, 25
Opportunity amelioration, 130, 135
Opportunity equalization, 125–126
  additional graphs, 148–149
  data, 130–134
  estimating returns to educational expansion, 126–127
  identification and estimation, 134–135
  results, 135–143
  simulating effect of educational expansion on earnings distribution, 127–128
  testing EZOP, 128–130
  testing oportunity equalizing effect of educational expansion, 126
Ordering, 77
Overall log-likelihood function, 193

Panel Socio-Economique "Liewen zu Lëtzebuerg" (PSEL3), 153, 156, 161
Panel Study of Income Dynamics (PSID), 77, 88
Par excellence, 124
"Paradox of redistribution", 54, 72*n*7
Partial mobility ordering, 76
Partial permutation matrices, 78

"Permanent income", 79
Personal characteristics, 195
Personal income taxes (PIT), 30–31, 34, 62–63
  iso-redistribution curves, 56
Pigou-Dalton transfers, 115*n*10
Policy evaluation, 144
Poverty, 2, 151
  child on, 167–168
  and household size, 153–155
Prais–Bibby index, 76, 78, 92–93
Pre-ordered Lorenz curve, 80
Pre-redistribution Lorenz curve, 80
Predefined groups of workers, 192
Probabilistic framework, 189
Progressivity, 30–32, 34–35, 49
Public policy, 124
Purchasing power parity (PPP), 4, 11

Quantile regressions, 191
Quantile treatment effect estimates (QTE estimates), 126, 128, 134, 136

Random effect probit (RE model), 166
Rank-dependent mobility, 78
Rawlsian social welfare program, 180
  A Theory of Justice, 179–180
  algorithm of minimizing ARD, 182–184
  ARD, 181–182
  congruence of algorithm with, 184–185
  Rawlsian social welfare function, 180–181
Real incomes of poor, 18–21
"Redistribution", 33
Relative income inequality approach, 114*n*3
Reranking, 35

S-concave function, 83, 85
Self-employment, income from, 8
Semi-parametric heterogeneity models, 189
Sensitivity to loans, 104
Serial correlation, 153, 160
Shapley value, 33
Shorrocks multi-period mobility indices, 106
Simple income matrices, 119–120
Simple probit model, 166
Simulated counterfactual distributions, 135
Size (t), 35
Social mobility, 76, 78
Social security contributions (SSC), 30, 34, 48–53, 56–57, 62
Social stress of population, 181
Social welfare function, 79
Socioeconomic mobility measurement, 78–79
Socioeconomic status (SES), 131
"Squeezed middle", 2, 13, 18
State dependence, 152, 155
Static models, 162
Structural mobility, 98, 114*n*2, 119

Tax, 30
  credits, 72*n*11
  progressivity, 54, 62
  reforms, 62
  revenue, 37
Tax-transfer system
  impact of aging and rising senior employment, 45–48
  assessment of levels and changes in redistribution, 35–42
  redistribution across different income groups, 42–45
  redistribution in, 35
  redistribution in different parts of, 48
  relative role of income taxes, social security contributions, and cash transfers, 48–53
  relative role of size of taxes and transfers, of tax progressivity and of transfer targeting, 54–62
Taxation, 34
Taxing Wages models, 62
Traditional empirical framework, 190–191
Transfer system, 30

Transfer-by-transfer analysis, 57
Transition matrix, 76, 79–80
Transitory shocks, 153
Two-period income panel data, 78

Unconditional likelihood for individual, 192
Unemployment, 76
Unemployment insurance transfers, 60
Upper-middle-class households, 44
Upward mobility application, 88–90
Upward mobility favoring sequential averaging (UMFSA), 81–82, 90–92

"Veil of ignorance", 180
Vertical equity, 34–35

Wage discrimination, 188–189
  finite mixture model to measure, 191–195
Wage equation, 190
Welfarist measures, 79
Working characteristics, 195
World Inequality Database, 2, 7
