INDEX

Accuracy
  balanced, 42, 45
  brand, 107
  capability, 88–89
  cluster analysis, 72
  forecasting, 13, 15, 107–108
  model accuracy, 108
  performance measures, 41
Autoregressive integrated moving average (ARIMA), 103–104, 108, 111, 116

Balanced accuracy, 42, 45
Balance sheet measurement, 26
Binary target variable, 52

Candidate models, 40
Cash flow measurement, 26
Closed-end fund discount (CEFD), 5
Cluster analysis method, 72–73
  cubic clustering criterion (CCC), 74–75
  fleet maintenance data set, 72
  inverse distance weighted (IDW), 74
  sum of squares error (SSE), 74–75
Collaborative planning, 102
Commercialization, 150, 152, 155–156
Compensation committee, 24
Consumer sentiment, 4–5
Corporate valuation measurement, 25
COVID-19 pandemic, 35–36
  commercialization, 150, 152, 155–156
  international price, 152, 155–156, 159
  Peru. *See* Peru, COVID-19 pandemic
  technological industry, 155–156
COVID-19 treatment efficiency, China
  data envelopment analysis (DEA) method, 120–122
  dynamic trend analysis, 142–143
  efficiency analysis, 125–146
  first-stage efficiency, 144
  management implications, 143–146
  policy suggestions, 143–146
  second-stage efficiency, 145
  two-stage efficiency analysis, 126–127, 131–132, 136–137, 141–142
Cubic clustering criterion (CCC), 75
Cubic smoothing spline, 103–104

Data cleaning, 105
Data envelopment analysis (DEA) method
  serial two-stage model, 123–125
  traditional model, 122–123
Demand forecasting, 29–30
Demand management, 101–102
Demand planning, 102
Dependent variable, 7
Desirable values, 95
Digitization, 157–158
Double exponential smoothing, 103–104

Earnings per share (EPS), 8–10
E-commerce, 152
Economic/financial indicators, 6
Economic indicator variables, 8
Emergency rooms (ERs), 35–36
Equity markets, 7

False positive rate (FPR), 53–54
Federal Reserve Economic Database (FRED), 7

Financial market performance, 4–5
Financial market variables, 8–10
Firm value (FV), 3–4
Fleet maintenance data set, 72–73
Food inflation, 163
Forecasting accuracy
  accuracy by method, 107–108
  autoregressive integrated moving average (ARIMA), 103–104
  collaborative planning, 102
  cubic smoothing spline, 103–104
  data cleaning, 105
  demand management, 101–102
  demand planning, 102
  double exponential smoothing, 103–104
  future research, 108–109
  long-term seasonal random trend (LTSRT), 103–104
  pandemic's effect, 102
  random walk with drift, 103–104
  seasonal random trend (SRT), 103–104
  seasonal random walk (SRW), 103–104
  simple autoregression, 103–104
  simple exponential smoothing, 103–104
  simple linear regression, 103–104
  simple polynomial regression, 103–104
  specific stock-keeping unit (SKU), 102–103
  time series, 103
  trend and seasonality, 106
Forecasting data, 30–31

Gamma distribution, 88–89
Gradient boosting, 12
Gross domestic product (GDP), 4–5, 164–165
5G technology, 158

Home Mortgage Disclosure Act website (HMDA), 54
Huawei, 154, 158

Income statement, 26
Independent variables, 7
Intellectual property, 156–157
International price, 152, 155–156, 159, 164
Inverse distance weighted (IDW), 76–77, 79
Investor sentiment, 6–7

Length of stay (LOS)
  balanced accuracy, 42
  candidate models, 40
  COVID-19, 35–36
  distribution of patients, 37
  emergency rooms (ERs), 35–36
  performance measurement, 41–42
  predictive models, 40
  random oversampling (ROS), 36
  random undersampling (RUS), 36, 42
  resampling methods, 40–41
  Rhode Island Hospital Discharge Data, 36
  RUS Boost, 40
  SMOTE, 40–41
  true negative rate, 41
  true positive rate, 41
  variable importance, 44
  variables descriptions, 39
  Veterans Health Administration (VHA), 36
Long-term seasonal random trend (LTSRT), 103–104
Lower bound, 98
Lower specification limit (LSL), 89–90, 92

Manager sentiment, 6–7
Market capitalization, 6

Market sentiment, 3–4
closed-end fund discount (CEFD), 5
consumer sentiment, 4–5
data, 7–11
dependent variable, 7
economic/financial indicators, 6
economic indicator variables, 8
financial market performance, 4–5
financial market variables, 8–10
gross domestic product (GDP), 4–5
independent variables, 7
investor sentiment, 6–7
manager sentiment, 6–7
market capitalization, 6
personal consumption expenditure (PCE), 8
Purchasing Manager's Index (PMI), 10
sentiment report variables, 10–11
simple moving averages (SMAs), 8–10
US Treasury Note, 8–10
Volatility Index (VIX), 8–10
Mean absolute deviation (MAD), 31, 80, 83
Mean absolute percentage error (MAPE), 80, 83
Mean absolute percent error (MAPE), 31
K-means clustering, 73–74
Mean square error (MSE), 80, 83
MetLife
balance sheet measurement, 26
cash flow measurement, 26
compensation committee, 24
corporate valuation measurement, 25
definition, 24
income statement, 26
management effectiveness, 25–26
peer companies of, 24–25
peer group, 24
regression model, 24, 26
Model development
gradient boosting, 12
neural network, 13
random forest, 11–12
Model seasonality, 31
Modified undersampling method, 56
Monthly forecasting, 31
Moving average (MA) forecasts
definition, 76
estimation methods, 80–83
interpolation adjustments, 76–77
inverse distance weighted (IDW) interpolated values, 76–77, 79
mean absolute deviation (MAD), 80–83
mean absolute percentage error (MAPE), 80–83
mean square error (MSE), 80–83
Multilateral trading system, 151–152
Multilayer perceptron (MLP), 13
Multiple linear regression (MLR)
cluster analysis method, 72–73
cubic clustering criterion (CCC), 75
estimation methods, 80–83
fleet maintenance data set, 72–73
future research, 83–84
interpolation adjustments, 76–77
inverse distance weighted (IDW), 79
mean absolute deviation (MAD), 80, 83
mean absolute percentage error (MAPE), 80, 83
K-means clustering, 73–74
mean square error (MSE), 80, 83
moving average forecasts, 76
sum of squares error (SSE), 75

Neural network, 13
Non-normal distributions, 88–89
Normality distribution, 88–89

Pandemic's effect, 102
Peer companies, 24–25
Peer group, 24
Performance measurement, 41–42
Performance metrics, 53–54
Personal consumption expenditure (PCE), 8
Peru, COVID-19 pandemic
