

INDEX

- Abnormal operating cash flow
(AB_CFO), 39–40
- Accrual earnings management, 36
- Accurate regulations, 91
- Achievement motivation (AM),
142–144
- Actors, 121
- Adaptability, 146
- Additional analysis, 136–137
- Additivity, 97
- Adjusted Sharpe ratio, 63
- Age, 112
- Altruism or concern for family, 108
- Annual probit regression analysis, 67
- ARDL model, 10
- Asset price volatility, 10
- Asset prices and returns, 5
- Asset pricing model, 64, 68–71
- Asymmetric information, 5
- Augmented–Dickey–Fuller
statistics (ADF statistics),
72–73
- Average Variance Extracted (AVE),
26, 158
- Bank stability, 48
 - literature review, 49–51
 - methodology, 51–53
 - results, 53–57
- Banking, 48
- Banks, 48
 - liberalization, 54
 - market power, 49, 52
- Bitcoin, 84
- Bond spreads, 3
- Brazil, Russia, India, China, and
South Africa (BRICS), 65
- Business risk, 2 (*see also* Systemic
risk)
 - premium, 3, 5
- Capital Asset Pricing Theory
(CAPM), 63, 70
- Cash flow (CF), 4, 7, 9
- Central banks, 84
- Central Bureau of Statistics (BPS),
94, 108
- CEO tenure, 174
- Coefficient of variation (CV), 132
- Company performance, 173–174
- Competition, 49–50
- Competition-fragility view, 50
- Competition-stability view, 50
- Composite reliability, 26, 149
- Conditional value at risk method
(CoVaR method), 85–86
- Conservative minus aggressive
(CMA), 70
- Consumption, 110
 - based on LC-PIH, 112–115
 - based on life cycle hypothesis,
111–112
 - based on permanent income
hypothesis, 110–111
- Convergences Actors X Actors
(3CAA), 121
- Convergent validity, 148
 - measurements, 26
- Corporate debt, 40
- Corporate governance (CG), 62–63
- Correlation analysis, 53
- Correlation matrix, 26
- COVID-19, 94
 - pandemic, 48, 84
- Credit market vulnerabilities, 84
- Crisis, 48
- Cronbach's alpha, 26
- Cross-loadings, 26, 158
 - criterion, 160–162
- Cross-sectional regression, 39
- Cross-sectional risk, 7–8

- Data, 51
- Debt level, 128
- Debt-to-GDP ratio, 4
- Debt–Service Ratio (DSR), 4, 7–10
- Default spread, 2
- Dependent variables, 52
- Descriptive statistics, 10–11, 40–41, 53
- Digital finance adoption, 48
- Digital finance expansion, 54
- Discriminant validity, 148–149, 158
 - testing, 160–165
- Diversification, 49–50, 54
- Dividend yield, 2
- Dual banking system, 85

- Earnings managements, 36
- Econometrics model, 40
- Economic sector shocks in Jakarta, 97–98
- Economic strategies, 175
- Economic theory, 110
- Entrepreneurial orientation, 159
- Equally-weighted averages (EW), 63
- Estimation method, 71–72
- Ethical leadership, 145
- Explanatory variables, 52–53

- Fama–French five factors (5FF), 66
- Fama–French–Carhart four factors (4FFC), 64–65
- Fama–MacBeth regression, 72
- Family firms, 36
- Family owners, 37
- Family ownership, 37–39
- Federal Reserve, 84
- Financial deregulation, 50
- Financial friction (FF), 3, 7, 9
- Financial inclusion, 110
 - literature review, 110–115
 - materials and methods, 115–116
 - results, 116–123
- Financial information, 128
- Financial literacy, 21–24
- Financial market indicators, 6
- Financial performance, 159
- Financial statements, 36
- Financial technology, 50
- Firm value
 - literature review and hypothesis development, 129–130
 - method, 130–132
 - results, 132–137
- Firms, 39–40
 - environment, 173
 - performance, 172
- Forest destruction, 62
- Fornell and Larcker’s criterion, 160
- Friction value, 3

- G-Power software version 3.1, 24
- Generalist CEO, 172–173
 - literature review and hypothesis development, 173–174
 - methodology, 174–175
 - result, 175–177
- Generalized Autoregressive
 - Conditional Heteroskedasticity model (GARCH model), 63, 72, 87
- Global financial crisis, 48–49
- Global leadership, 143, 145
- Global supply chain loss, 94
- Government policy, 21–24
- Government role, 112
- Gross domestic product (GDP), 108

- Herfindahl–Hirschman Index (HHI), 49, 51–52
- Heterotrait–Monotrait ratio of correlation (HTMT), 158, 162–165
 - ratio of correlation, 160–165
- High-performance work systems (HPWS), 142–143
- Homogeneity, 97
- Human resources performance (HR performance), 142–144
- Hypothesis test, 27–29
- Hypothesis testing, 150

- Income, 110
 - growth, 112
- Indonesia's DSR, 4
- Indonesia, 20, 36–38, 94, 108, 175
- Indonesia Bond Pricing Agency (IBPA), 9
- Indonesia Securities Investor Protection Found (Indonesia SIPF), 42
- Indonesia Stock Exchange (IDX), 51, 63
- Indonesia's GDP, 4
- Indonesian economy, 85
- Indonesian Financial Services Authority, 21
- Indonesian macroeconomic risk estimators
 - literature review, 5–8
 - research methodology, 8–10
 - results, 10–14
- Indonesian SMEs
 - findings, 165–168
 - research background, 159–160
 - testing discriminant validity and HTMT ratio of correlation, 160–165
- Indonesian stock market, 4
- Industrial revolution 4. 0, 142
- Industry competition, 128
- Inflation-targeting policies and performance, 20–21
- Input–Output model (IO model), 95
 - economic sector shocks in Jakarta, 97–98
 - empirical result, 98–104
 - framework, 95–97
 - framework assumptions, 97
 - literature review, 95–98
- Institutional theory, 36
- Inter-Regional Input–Output (IRIO), 95
- Internal consistency, 26
- International Monetary Fund (IMF), 84
- Investment-to-GDP ratios, 3
- Investors, 36
- Islamic higher education (IHE), 142
- Jakarta, 94
 - Composite Index, 85

- Jensen Alpha, 64–65
- JIBOR, 86
- KBV, 21
- KEHATI Foundation, 63, 65
- Keynes's theory, 110
- Leadership, 145
- Leontief inverse matrix, 96–97
- Lerner Index, 49, 51–52
- Leverage risk, 3
- Life cycle hypothesis, consumption based on, 111–112
- Life Cycle Permanent Income Hypothesis (LC-PIH), 110
 - consumption based on, 112–115
- Likert scale, 25
- Liquidity constraints, 112
- Liquidity risk, 3, 5
- Lockdown, 94
- Long-term consumption, 110
- Low managerial ownership, 38
- Macroeconomic risk, 2, 6
- Macrofinance studies, 2
- Macrofinancial relationships, theoretical foundations of, 5–6
- MACTOR, 115, 120
- Marginal Expected Shortfall method, 85
- Marginal Propensity to Consume (MPC), 110
- Market capitalization, 128, 130
- Market failure, 3
- Market power, 50
- Market risk premium formula, 3
- Market volatility risk, 3
- Matched portfolio, 66–68

- Matching method, 64
- Matrix Actors X Objectives (3MAO), 121
- Mean-variance efficient portfolio, 68–69
- Measurement model results, 26–27
- Measurement/outer model, 148
- Micro, Small, and Medium Enterprises (MSMEs), 23
- Microfinance, 5
- Migrant workers, 108
- Migration, 108
- Mixed method, 115
- Moral competence, 145
- Moral global leadership (MGL), 142–143
 - analysis and results, 147–151
 - methodology, 147
 - moderating role, 145–146
 - theory and conceptual model, 143–146
- Moral leadership, 145–146
- Multicollinearity, 41
- Multicultural Personality Questionnaire (MPQ), 145
- Multifactor models, 63
- Multiplier, 97
- Mutual fund managers, 70

- Neglected stock theory, 64
- Neo-classical economic theory, 62
- Net interest margin (NIM), 53
- Newey–West regression, 76
- Non-ethical stocks, 64
- Non-financial performance, 159
- Non-financial public companies, 38
- Non-performing loan (NPL), 52
- Normal operating cash flow, 39

- Organisation for Economic Co-operation and Development (OECD), 20
- Organizational performance, 142

- Partial Least Square-Structural Equation Modelling (PLS-SEM), 159
- Partial least squares (PLS), 25–26, 147
- People’s Business Credit program, 23
- Performance, 171–172
- Permanent income hypothesis, consumption based on, 110–111
- Plastic waste, 62
- Policy actors, 22
- Policy environment, 22
