

AGRI-FOOD 4.0

ADVANCED SERIES IN MANAGEMENT

Series Editors: Miguel R. Olivas-Lujan and
Tanya Bondarouk

Previous Volumes:

Indigenous African Enterprise: The Igbo Traditional Business School (I-TBS)

Ed. Ogechi Adeola

Integration of Migrants into the Labour Market in Europe: Integration of Migrants into the Labour Market in Europe

Eds. Sylwia Przytuła and Łukasz Sułkowski

Sustainable Hospitality Management: Designing Meaningful Encounters with Talent and Technology

Eds. Huub Ruël, Angelique Lombarts, and Jeoren A. Oskam

HRM 4.0 For Human-Centered Organizations

Eds. Rita Bissola and Barbara Imperatori

Diversity within Diversity Management: Types of Diversity in Organizations

Eds. Andri Georgiadou, Maria Alejandra Gonzalez-Perez, and Miguel R Olivas-Lujan

Diversity within Diversity Management: Country-based Perspectives

Eds. Andri Georgiadou, Maria Alejandra Gonzalez-Perez, and Miguel R Olivas-Lujan

Indigenous Management Practices in Africa: A Guide for Educators and Practitioners

Eds. Uchenna Uzo and Abel Kinoti Meru

Organisational Roadmap Towards Teal Organisations

Eds. Tanya Bondarouk, Anna Bos-Nehles, Maarten Renkema, Jeroen Meijerink, and Jan de Leede

International Business Diplomacy: How can Multinational Corporations Deal with Global Challenges?

Ed. Huub Ruel

Age Diversity in the Workplace

Eds. Silvia Profili, Alessia Sammarra, and Laura Innocenti

New Ways of Working Practices: Antecedents and Outcomes

Ed. Jan de Leede

Dead Firms: Causes and Effects of Cross-Border Corporate Insolvency

Eds. Miguel M. Torres, Virginia Cathro, and Maria Alejandra Gonzalez Perez

Human Resource Management, Social Innovation and Technology

Eds. Tanya Bondarouk and Miguel R. Olivas-Luján

Shared Services as a New Organizational Form

Ed. Tanya Bondarouk

Social Media in Human Resources Management

Eds. Tanya Bondarouk and Miguel R. Olivas-Luján

Social Media in Strategic Management

Eds. Miguel R. Olivas-Luján and Tanya Bondarouk

(Dis)honesty in Management: Manifestations and Consequences

Eds. Tiia Vissak and Maaaja Vadi

Commercial Diplomacy and International Business: A Conceptual and Empirical Exploration

Ed. H. Ruël

Electronic HRM in Theory and Practice

Eds. T. Bondarouk , H. Ruël, and J.C. Looise

Relational Practices, Participative Organizing

Eds. Chris Steyaert and Bart Van Looy

Autopoiesis in Organization Theory and Practice

Eds. Rodrigo Magalhaes and Ron Sanchez

Organizations as Learning Systems “Living Composition” as an Enabling Infrastructure

Ed. Marjatta Maula

Complex Systems and Evolutionary Perspectives on Organizations: The Application of Complexity Theory to Organizations

Ed. Eve Mitleton-Kelly

Managing Imaginary Organizations: A New Perspective on Business

Eds. Bo Hedberg, Philippe Baumard, and A. Yakhlef

Systems Perspectives on Resources, Capabilities and Management Processes

Eds. John Morecroft, Ron Sanchez, and Aimé Heene

Tracks and Frames: The Economy of Symbolic Forms in Organizations

Ed. K. Skoldberg

ABOUT THE EDITORS

Dr. Rahul S Mor is a researcher of operations management & supply chain, industrial engineering & management, manufacturing systems, etc., and has over four years of teaching & research experience, primarily at the National Institute of Food Technology Entrepreneurship and Management, Kundli. He holds a Ph.D. in *Industrial and Production Engineering*, specializing in Supply Chain & Operations Analytics. Dr. Mor has authored/co-authored over 50 publications in international refereed SCI, ABDC, CABS ranked journals of high impact factor, & many chapters, books, conference papers. One of his MoFPI (Govt. of India) funded research projects supports the agri-food supply chain digitalization through disruptive technologies, among other R&C projects in the manufacturing and food sector. He is also supervising research at the doctoral and masters levels.

Dr. Mor has edited four books on ‘Agri-Food 4.0’, ‘Circular Economy’, ‘OSCM’, ‘Industry 4.0’ with Springer, Emerald, EAI-Springer. He is the *Area Editor* and *Managing Guest Editor*: *Opr. Mgmt. Res.* (Springer), *Int. J. Logi. Res. & Appl.* (T&F); *Guest Editor*: *IEEE Trans. on Engg. Mgmt.* (IEEE), *Int. J. Transp. Eco.*; *Associate Editor*: *Supply Chain Forum: An Int. J.* (T&F); *Editor*: *IJSOM*; *Editorial Board*: *JDS, FSFS, IJCEWM, IJLT*, etc., and reviewer for numerous international journals. He is a member of many professional societies.

Dr. Dinesh Kumar is a researcher in the area of supply chain management. He is working as assistant professor in the Department of Production and Industrial Engineering, National Institute of Technology Jamshedpur, Jharkhand, India. He has completed his Ph.D. from IIT Roorkee in supply chain management in the year 2016. He has authored a number of papers in reputed international journals in the area of supply chain management and presented papers in various international conferences in India and abroad. He has supervised 5 master’s dissertations. He is a life time member of Operation research Society of India (ORSI). His current area of research are operations management, supply chain management, perishable inventory management and system dynamics.

Dr. Anupama Singh has over 27 years of academic experience in the agri-food processing sectors. Her research interests include Bio waste utilization, Sustainable food processing novel technologies, product development and value addition.

Dr. Singh has received various accolades, recognitions and fellowships and awards at the national and international levels, including the prestigious Norman Borlaug Fellowship by USDA/ICAR and the National Fellow Award by ICAR, India. She has executed multiple R&D and Consultancy projects. She has guided 4 doctoral research, 28 M. Tech. Thesis and many research projects at the graduate level. She has over 250 publications to her credit including research papers/articles in various peer-reviewed international and national journals, book chapters, technical bulletins, status reports, articles etc. She has presented more than 100 research papers in various National & International conferences.

After a sterling career, spanning over 25 year, at GB Pant University of Agriculture & Technology, Pantnagar, Dr. Anupama Singh is currently Professor and Head at Department of Food Engineering, National Institute of Food Technology Entrepreneurship and Management (NIFTEM), Kundli, Sonapat, India.

FOREWORD

डॉ. चिंदी वासुदेवप्पा

कुलपति

Dr. Chindi Vasudevappa

Vice Chancellor

राष्ट्रीय खाद्य प्रौद्योगिकी उद्यमशीलता एवं प्रबंधन संस्थान
यूजीसी अधिनियम, 1956 की धारा 3 के तहत सन विस्विद्यालय (डी-नोवो श्रेणी)
एवं खाद्य प्रसंस्कारण उद्योग मंत्रालय, भारत सरकार के अन्तर्गत एक स्वायत्त संस्थान
National Institute of Food Technology Entrepreneurship and Management
(Deemed to be University under Section 3 of UGC Act 1956)
(UNDER MINISTRY OF FOOD PROCESSING INDUSTRIES, GOVERNMENT OF INDIA)

The agri-food industry faces many challenges like food safety, security, demand and supply gaps, maintaining product quality, product traceability, etc. In the current scenario, intelligent digital technologies, including AI, IoT, big data analytics, blockchain, etc., have a complete paradigm shift towards safe, resilient, sustainable, and eventually profit-driven agri-food supply chains. Digital technologies also pave a path to reduce constraints in the supply chain by reducing human interference and improving data accuracy. In this context, the book “Agri-Food 4.0: Innovations, Challenges and Strategies” is scholarly, where researchers from various domains have contributed practice-oriented, case studies based, empirical research and review work.

The concept of ‘Agri-Food 4.0’ can bring significant changes by reducing food wastage, real-time product monitoring, and reducing scalability issues. The challenges and complexities in the implementation of such technologies have also been addressed well. The book will guide the supply chain and agri-food industry professionals to develop conventional supply chain operations while designing digital technologies. Academicians and researchers will surely be benefitted from this book towards converting the challenges into opportunities through technology-driven smart operations in the agri-be food sector.

(Dr. Chindi Vasudevappa)

PREFACE

Cost-effectiveness, high productivity and quality are fundamental requirements of any sustainable value chain and have become more crucial with rapid industrialization. In this line, 'Agri-Food 4.0' aims to achieve optimum value chain performance through digitized, resilient, innovative systems along with real-time monitoring and control while achieving sustainability. The term 'Agri-Food 4.0' is analogous to 'Industry 4.0' integrating modern tools and technologies to attain these performance indicators. Such tools and technologies include big data analytics, artificial intelligence, machine learning, IoT, information and communications technology (ICT), blockchain, smart sensors, advanced robotics, and modern drones. This book presents the introduction and applications of such technologies and the practices to reduce food losses and attain a circular economy.

Agri-food quality is crucial to making the product saleable and eventually generating revenue throughout the value chain. Hence, this book elaborates on the implementation of smart technologies like drones to effectively monitor crop quality in real-time. The drone-based quality monitoring system collects image data sets of crop products and classifies them using machine learning methods based on chromatic features, contour features, and texture features.

The integration of IoT in agri-food and supporting hardware tools are most important to achieve agri-food 4.0 and are presented in this book. An IoT-based intelligent irrigation system that controls the water flow based on soil moisture and temperature is also a part of this book. Further, the advancement in food packaging technologies, including smart packaging sensors, is discussed in the book.

Organization of the book: This book is organized as follows.

Chapter 1 describes thematic relationships within the sustainability of agri-food chains oriented toward Industry 4.0, focusing on analyzing scientific production through research articles and technological output according to patents worldwide. Chapter 2 highlights the digitalization of the agri-food supply chain through the implementation of IoT, blockchain, and artificial intelligence and challenges the agri-food supply chain participants perceive in implementing digital technologies. In this line, the Challenges of adopting supply chain 4.0 (SC 4.0) for the agri-food sector and using the total interpretive structural modeling (TISM) tool to analyze those challenges are discussed in Chapter 3. Further, wastage of food is a matter of grave concern, so searching how food waste or food loss could be reduced throughout a supply chain network is addressed in chapter 4. Furthermore, chapter 5 describes, due to growing environmental concern, how Industry 4.0 and blockchain technology (BCT) are transforming circular economy practices and, by employing CB-SEM modeling, provides three key findings. Finally, the role of blockchain technology and most disparate IoT devices in agriculture and the food supply chain for food tracing to address quality and safety is discussed in chapter 6. In Chapter 7, a vision system is introduced that monitors crop product quality with the help of Drone and vision camera technology. Mainly three vegetable crops such as tomato, cauliflower, and eggplant are considered for quality monitoring; hence image data sets are collected for those vegetables only. This chapter extracts three different features information, such as

chromatic features, contour features, and texture features, from the data set to train the Gaussian support vector machine-learning algorithm to identify the product quality.

A holistic overview of the latest trends of IoT in agriculture and other aspects of the ecosystem like storage, warehouse ambience control, agri-data analytics and decision control, logistics, environmental safety, etc., is highlighted in chapter 8. Further application of IoT in irrigation is discussed in chapter 9, which focuses on how the Internet of Things develops a Smart Irrigation system that leads to the optimization of water resources.

Chapter 10 aims to study artificial intelligence (AI) based product benefits and problems of the agritech industry. The study shows that the topmost AI benefit is better information for faster decision making and the topmost AI problem is resistance to change from employees and internal culture. Packaging plays a crucial role in satisfying consumer's demand for safe and quality foods; the same is discussed in Chapter 11, which focuses on different types of Active and intelligent packaging and its advantage over conventional packaging. In line with the Industry 4.0 technologies, chapter 12 explores the key performance indicators of agri-food supply chain. Finally, chapter 13 covers the innovation and challenges of implementing robotics and automation technologies toward agri-food 4.0.

Rahul S Mor
Dinesh Kumar
Anupama Singh

ACKNOWLEDGMENTS

We acknowledge all those people who were involved and helped in completing this book project. Firstly, we would like to thank the authors for contributing their valued time and expertise. Special thanks are due to the reviewers' valuable contributions regarding the improvement of quality, coherence, and content demonstration of the chapters. We also appreciate the referees for reviewing the manuscripts and scholars for editing & organizing the chapters. Finally, the editors are grateful to their parent institutes, National Institute of Food Technology Entrepreneurship and Management, Kundli, Sonapat - 131028 (Haryana), India, and National Institute of Technology, Jamshedpur (Jharkhand), India, for providing essential facilities to conduct this research work smoothly.
